

Chapter 1

- History: 1895 Marconi find wireless; 1930s - communication \rightarrow telecommunication; 1958 SCORE field; 1988 GSM; 1997: 1st WLAN
- Foundations: Cellular sys, mobile management, public network, sensor network, Internet of Things
- Software defined network

phenomenon return back to

spread (2) when wave meets a hold back, it produces

$$- f_d = \frac{1}{2\pi} \frac{\alpha \theta}{\Delta t} = \frac{\gamma}{\lambda} \cos \theta$$

- date is the most complicated routing update. MS change from one SGSN.

the original line (3) Thanks to the potential, wave has to change its linear trajectory.

- Indoor to send info 2 abr

- Intra-switch handoff

Mobile moves from one base to another

Both connected to each other

3. NCH0 - Contrived

MAHO - Assisted

4. Hard handoff: at one moment in time one call

uses only one channel in parallel which makes it cheaper!

Shortcoming is obvious:

the hard switch ping pong effect need more hardware.

straight-line mode fluid flow path way + describe the level in reservoir subject to randomly determine filling.

Intra switch: When a mobile signal \Rightarrow weakly in given a cell and we can use MTSO finds other cell \rightarrow its system to which

it is transferring the call then it utilizes some other cell in these sys to what it can transfer the call when it uses inter system but cell splitting \Rightarrow it's co-channel interference \Rightarrow MT handoff rate

Service delivery: cellular network can search our available access to called users. If we succeed collector will send us a feasible foreign nodes request to end.

Chapter 7

① Permanent IP: we want to mobile node registers with

↓ re-connection and make the home agent \Rightarrow using a registration message to denote

the sys more stable and easy to connect and update a binding.

Lifetime is limited so that a

HCF is hybrid condition function. With in HCF.

② Temporary IP: we want to mobile node registers with

↓ re-connection and make the home agent \Rightarrow using a registration message to denote

the sys more stable and easy to connect and update a binding.

Chances

Chapter 8

HA: home for the moving nodes, always send info to external the IEEE 802.11 based

outside nodes

WLAN standards.

FA: a router for nodes which are moving outside home

mechanism is used to obtain info to out-nodes to form

multicast

CV: A mobile node to communicate

MT \Rightarrow FA: tunnel's port

\Rightarrow HA \Rightarrow receiver

Mobile node \rightarrow registration

prospective agents, the home agent sends a registration.

foreign nodes \downarrow request

Lifetime is limited so that a

HCF is hybrid condition function. With in HCF.

① HCCA

② EDCF

Ad-Hoc modes

An ad-hoc network allows each device to communicate directly with each other.

Only able to Ad-hoc devices
