The Flask HelloWorld

```
from flask import Flask
app = Flask(__name__)

@app.route("/")
def hello():
    return "Hello World!"

if __name__ == "__main__":
    app.run()
```

- decorator
- route

Back-end

e.g.

```
@testserver.route('/login/', methods=['GET', 'POST'])
def login():
    """ Login function
    -----
    - post user's name, passwd, rss, id_num, timestamp to server
    - stat=1 represents admin while stat=0 means worker
    - if authorized, return position data and record the personal infoma
    """
    if request.method == "POST":
        usern = request.form.get('userid')
        passw = base64.encodestring(request.form.get('passwd'))
        db = MySQLdb.connect(host='localhost', user='root', passwd='', db='')
        cursor = db.cursor()

        # verify user info
        sql = "select passwd from users where userid=%s"
        exist = cursor.execute(sql, usern)
        tmp_pw = cursor.fetchall()[0][0]
        if exist == 1:
            if passw[:-1] == tmp_pw:
